GT surface
(DTU / CO3D depth)
3D sphere on
the surface
(seed, radius)
per-view hide masks
(3D-consistent:
hidden in all views)
fill
gray / blur /
noise / inpaint
frozen 3D model
(10 views in,
depth + conf out)
depth,
conf.
example: DTU scan 3, seed 0, radius 0.18 of the object diagonal, view 1
pixel labels
U: unsupported
(inside the sphere)
S: supported (outside,
beyond a dilated ring)
metrics
AUROC: conf(S) > conf(U)
CUR: share of U above the
threshold that keeps 90% of S
CUR-err: confident and
AbsRel > 0.1
AbsRel_U / AbsRel_S
clean view
